

150 MW Transmission/Distribution Renewable Power Plant

Technical Specifications:

Existing site has 500MW CenterPoint Energy substation and transmission level ERCOT grid connection to a 4 million population base. Located three miles from downtown Houston and Ship Channel, this former HL&P power plant had approximately 300 MW of steam and turbine generators. Plans include adding 50 MW to distribution system and a future 100 MW transmission system for the nations first load centered renewable power project.
